

Student Course Registration System

User requirement:

- User-friendly interface to log in to the system and register for the course.
- Checking the requirements while registering for the course and based on that user can add or drop the course.
- Course search and selection method is easy that can send the confirmation letter to the user through the email and lead to generate the preview eventually.

System requirement:

- The system should be secured with high security services and the confidential information should remain encrypted.
- System should be reliable for its users- not only the students but also the staff.
- The system performance should be at its peak to have a smooth registration process.
